PLATFORM BRIEFING / OCTOBER 21, 2026

A clearer guide to IMSDA Events

Current features. Practical help. Future possibilities.

CURRENT

HELP

FUTURE

Prepared for the IMSDA Events team
Repository baseline 5e367b7c · Editable briefing

Read every feature with its status

Implemented

Present in the repository. Confirm configuration and serving release before training on a live event.

Gated or needs setup

Code exists, but activation, credentials, approved scope or operational evidence is still required.

Accepted design

The visual direction is accepted. The production interface may still be awaiting implementation.

Later plan

An issue or proposal describes possible future work. Timing and decisions remain with the roadmap.

A substantial event foundation already exists

Registration

Versioned forms, group/club flows, amendments, waitlists and private management links.

Money

Payments, refunds, adjustments, church invoices, sponsorship and reconciliation reports.

Event operations

Lodging, meal tickets, scanner imports, kitchen counts, assets and check-in.

Club ministry

Annual rosters, forms, Monthly Records, honors, orders and scoped portals.

Communication

Central Email, templates, announcements, schedules and reviewed audiences.

Public discovery

Event pages, public calendar, club finder, content and existing public links.

One visual language. Four different jobs.

Attendee

Manage accessible registrations, profile and permitted next actions.

Director

Work within a selected club and club year, using the capabilities actually granted.

Area Coordinator

Review available clubs and reports, with narrow existing decision permissions.

System administrator

Manage the platform and deliberately enter an event for authorized work.

Attendee help starts with the next action

What people can do

- Register as a guest or use their account.
- Return through an authorized account or private management link.
- Review registration state, event information and permitted payment or change actions.

What help must explain

- A waitlist request is different from a confirmed place.
- Cancelled registrations remain part of history.
- Payment, registration and check-in states mean different things.

Directors work from club and year

Daily tasks

- Maintain the authorized club roster and fix missing details.
- Complete club forms and Monthly Records.
- Choose people for events and manage permitted changes.

Keep these distinctions visible

- Deputy, registrar and reporter have different capabilities.
- Church-billed events belong to the sponsoring church’s invoice flow.
- Birth dates and health information have separate access rules.

Coordinators need oversight, not a director clone

Current oversight

- Review clubs available to the role.
- Follow Monthly Records, points and event participation.
- Use existing scoped review paths, including the narrow Team approval exception.

Avoid misleading training

- Do not imply an enforced area/ministry filter exists today.
- Club and report views are generally read-only.
- Event health information follows a separate permission and time-window contract.

Administrator training should follow real work

Existing system responsibilities

- Event and access administration.
- Central Email and notification settings.
- Calendar, directory, imports and operational readiness evidence.

Accepted design improves clarity

- Explicit System versus Event context.
- Action-first summaries with truthful count meanings.
- Clear settings impact, dirty-edit recovery and task-based help.

Form reuse has several distinct meanings

Event template

A starting configuration for an event; operational module data has its own ownership.

Form template

A copied form definition. Seeded versions exist; app-editable templates remain planned work.

Published form version

Each registration stays tied to the version it used. A draft change does not rewrite old answers.

Future saved questions

A separate copy-on-insert library proposal, with reference and permission details still owned by its issue.

Operations depend on distinct records and states

Registration ≠ payment

A request, booking state and balance each answer a different question.

Check-in ≠ screening

Arrival uses the existing event eligibility and audited override rules.

Meals sold ≠ meals served

Scanner records, cancellations and kitchen-entered counts keep their own meaning.

Money report ≠ future ledger

Current financial records are the baseline; the general append-only ledger is later work.

Accessibility has a useful existing foundation

Shared controls

Reusable labelled actions, dialogs, sortable tables and form validation.

Responsive work

Existing phone/card layouts and automated page/dialog/field audits.

Recovery patterns

Current dirty-navigation and error patterns can be applied consistently.

Evidence boundary

Source checks and automated layout tests do not certify keyboard, screen-reader or WCAG conformance.

SOURCE Responsive conventions · See speaker notes and companion documents

Fix confusing behavior before adding more surface

Trustworthy links

Copy saved public URLs, not an unsaved slug. #1115

Truthful results

Describe the active sort and disclose the email recipient cap. #1116 / #1103

Recoverable edits

Protect unfinished roster, announcement and schedule work. #1101 / #1104

Complete discovery

Open the full crowded calendar day and explain finder/map coverage. #1117 / #1118

Lifecycle meaning

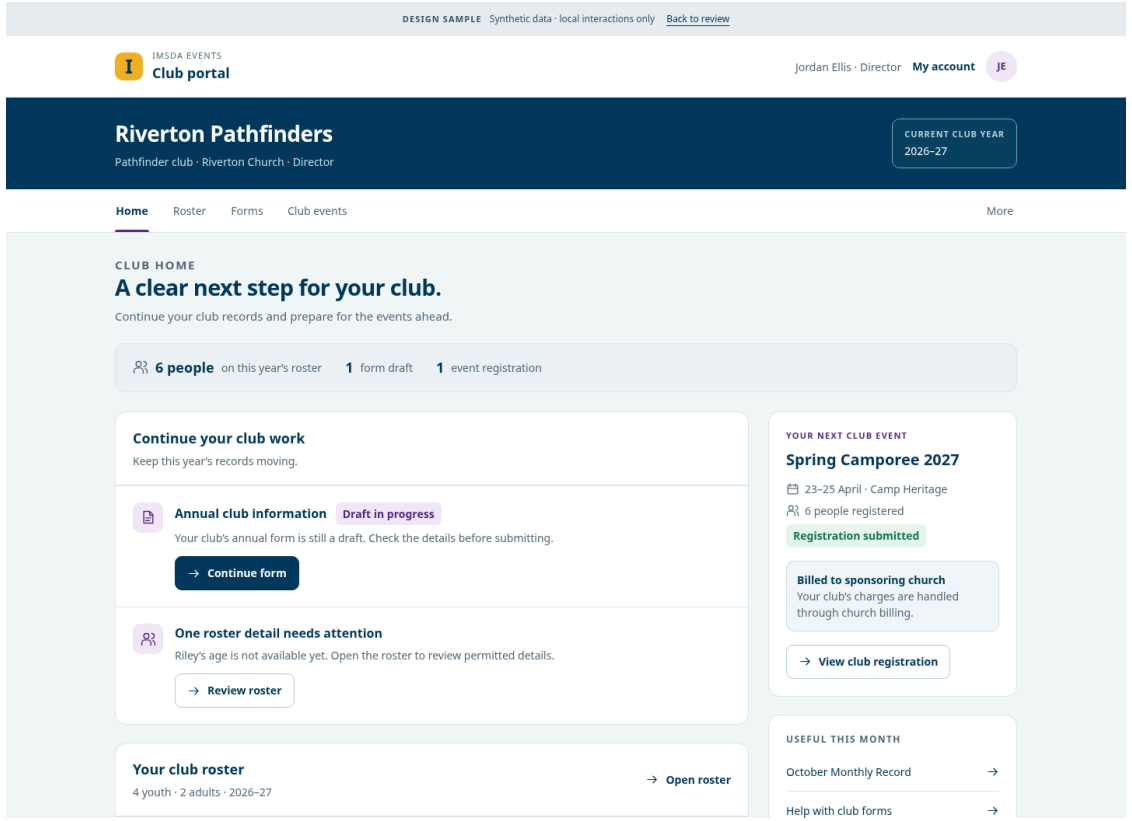

Align attendee amount-due and upcoming summaries. #1100

Intermediate widths

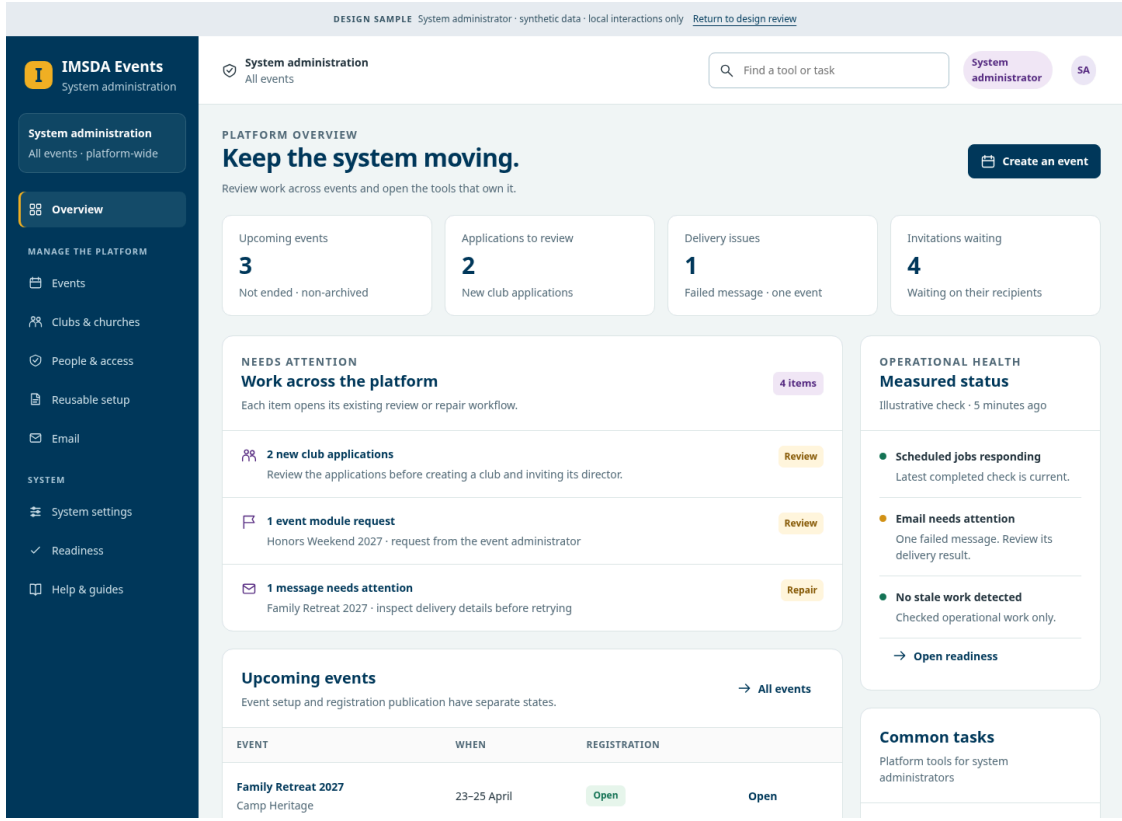

Resolve invitation-table overflow around 861px. #1045

Accepted design is a reference, not a shipped screen

Director club/year workspace

System administrator workspace

Help should answer a task in plain language

Included in the companion guide

- Four role-specific quick starts.
- Short FAQs and recovery explanations.
- Support triage and task-oriented help copy.

Draft content stays honest

- Editorial placeholders are not runtime template tokens.
- Messages name the event, current state and permitted next action.
- Future features are announced only after their actual availability is confirmed.

SOURCE Current communications templates · See speaker notes and companion documents

Future possibilities extend the foundation

Authoring & presentation

Editable form libraries, improved builder, saved views and versioned presentation.

Ministry expansion

Adventurer classes, awards and voluntary reviewed adoption after supplied materials.

Attendee convenience

Reviewed returning profiles, wallet passes and native access.

Operational depth

General sessions, volunteers, transportation, personnel, incidents and minor release.

Publishing & exchange

Full event sites, scoped APIs/webhooks and approved provider adapters.

Other business models

Installments, store balances, fundraising and other parent scopes remain separate.

A full youth-camp system needs more than events

Reusable IMSDA foundation

- Registration and financial records.
- Lodging inventory, meals and issued assets.
- Club/guardian declarations, check-in and scoped communication.

Camp capabilities to establish

- Camper/guardian authority and session enrollment depth.
- Counselor supervision, cabins/bunks and daily activities.
- Medication/treatment records, custody release, store allowances and camp outage procedures.

What we need from UltraCamp

Operational walkthrough

How the camp actually handles a family, camper, session, cabin, activities and daily exceptions.

Data dictionary

Stable IDs, relationships, status meanings, history and changed/deleted-record behavior.

Supported access

Approved API/report/export methods, entitlement, limits and synthetic examples.

Protected boundaries

Health, medication, insurance, authority and retention capabilities require explicit approval.

Financial evidence

Balances, transactions, refunds, credits and processor reconciliation; no portable card secrets.

Written operating terms

Permitted use, vendor approval, ownership, support and an agreed continuity/exit method.

SOURCE Existing UltraCamp research · See speaker notes and companion documents

The code is a modular monolith

Pages & route handlers

Next.js entry points collect input and invoke server-side access and domain services.

Owning domain modules

Forms, registrations, access, finance, lodging, meals, honors and communication keep their boundaries.

Persistence & work queues

Prisma/PostgreSQL, immutable versions, audit records, private storage and email outbox.

External adapters

Payment/email/providers use defined adapters; provider payloads are not the core domain model.

There is measured verification evidence

13,504

tests passed

1

test skipped

1,015

test files passed

Current main smoke passed: clean migrations, schema drift, seed, lint, typecheck and Vitest.

Know what those checks do not prove

Additional recorded checks

- Last application PR: extended real-DB/HTTP suites passed.
- Mobile audit: 320 page/width combinations at 360 and 1024px passed.
- Optional badge-print checks passed on that application revision.

Human & physical evidence

- Serving release, production configuration and real key restore.
- Screen-reader/keyboard usability and broader device/zoom testing.
- Physical printer/label scans, provider activation and operational sign-off.

Build on the materials already in Git

Decisions & policy

Existing ADRs and the roadmap preserve authority, scope and approval history.

Rehearsal & release

Readiness reviews, event runbooks and physical print checks already cover operational preparation.

Imports & sample outputs

Existing JSON/CSV fixtures and sample registration PDFs show supported inputs and outputs.

Design references

Accepted role layouts and proposed public/list studies are published with clear ownership.

SOURCE Existing docs · See speaker notes and companion documents

Use the pack for explanation and review

Feature guide

Explain what is implemented, gated, accepted as design and planned.

Usability review

Review concrete problems and their existing issue owners.

Help kit

Adapt role-specific guides and draft messages for the real audience.

Separate camp report

Prepare an informed camp-operator/UltraCamp discussion.

Technical evidence

Understand module ownership and the exact checks recorded.

Editable assets

Use the PowerPoint and Word copies; share the PDF companions.

Source notes and further reading

Project authority

- #98—ordered roadmap and current queue.
- #844—comparison/backlog review index.
- #1109 and #1073/#1074—accepted role and admin design.
- #1062—form-builder stages and remaining review.

Companion evidence

- Five source-linked documents explain details and limits.
- Technical-check JSON preserves run IDs and revisions.
- Camp sources distinguish dated research from vendor-confirmed access.
- Speaker notes identify sources and status for each slide.
