WHAT IS SHARED, AND WHAT CHANGES

Consistent branding. Different jobs.

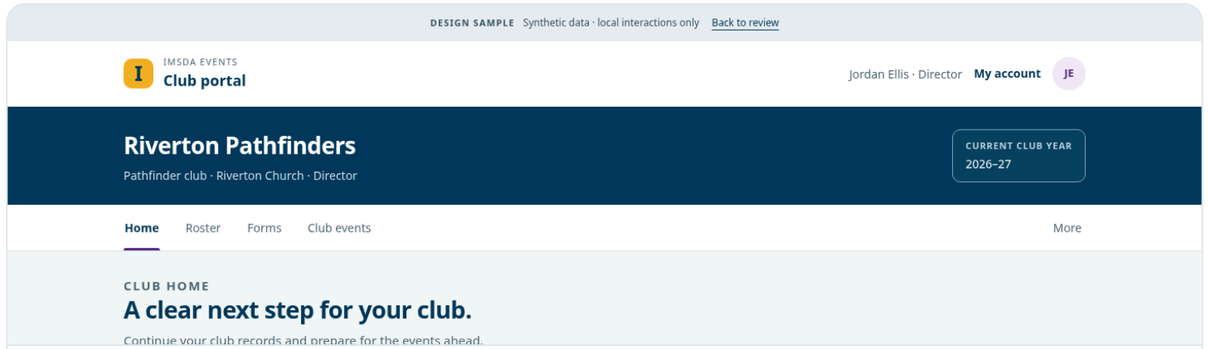

These four examples use separate sample identities. The review gallery links them for comparison; that navigation does not appear inside their application menus.

PERSONAL PORTAL

Attendee

My registrations

CLUB PORTAL

Club director

My club and club year

COORDINATION PORTAL

Area Coordinator

Clubs available to me

PLATFORM WORKBENCH

System administrator

The platform across events

Shared: colors, typography and accessible controls. **Tailored to each role:** navigation, task priorities, records and permitted actions. Proposed layouts use synthetic data and local demonstrations; they do not change permissions or production behavior.

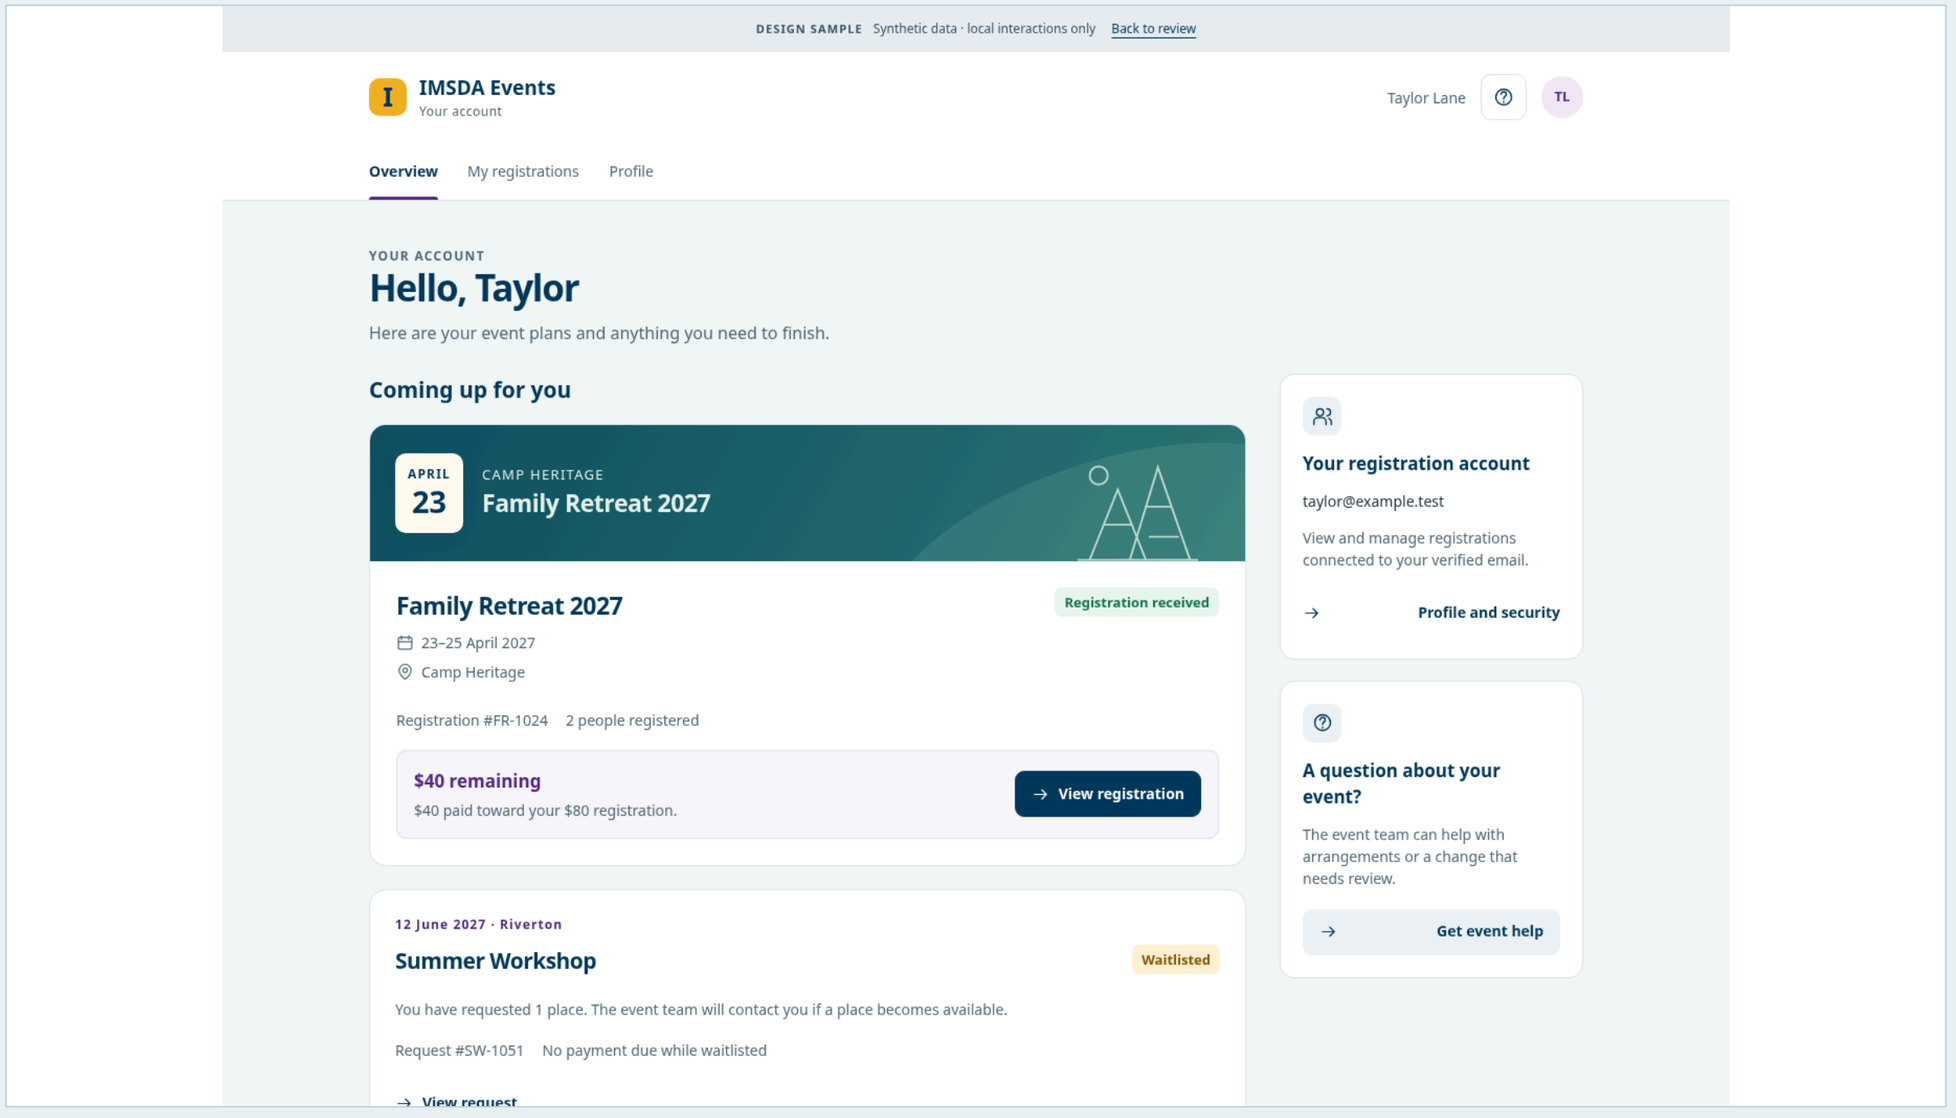

PERSONAL PORTAL

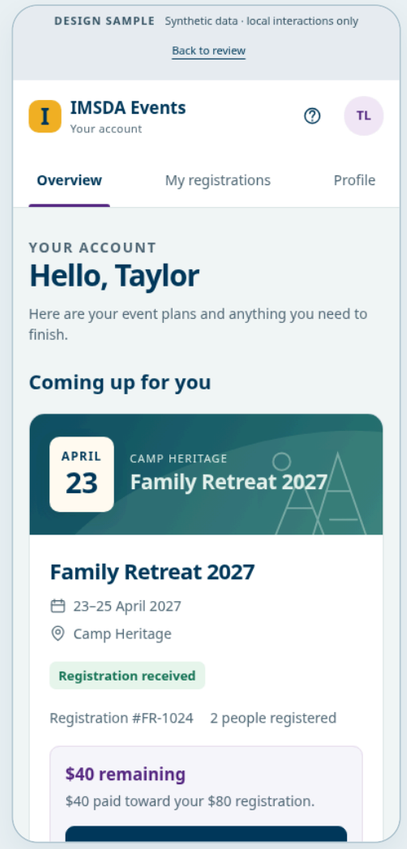

Attendee: my registrations

Find an event registration, understand its status and take the next permitted step.

Scope Only this account's accessible registrations

Navigation Overview · My registrations · Profile

390 × 844 phone view

A personal header and registration cards replace the administrator sidebar. A direct-billing Family Retreat is separate from waitlisted and cancelled history.

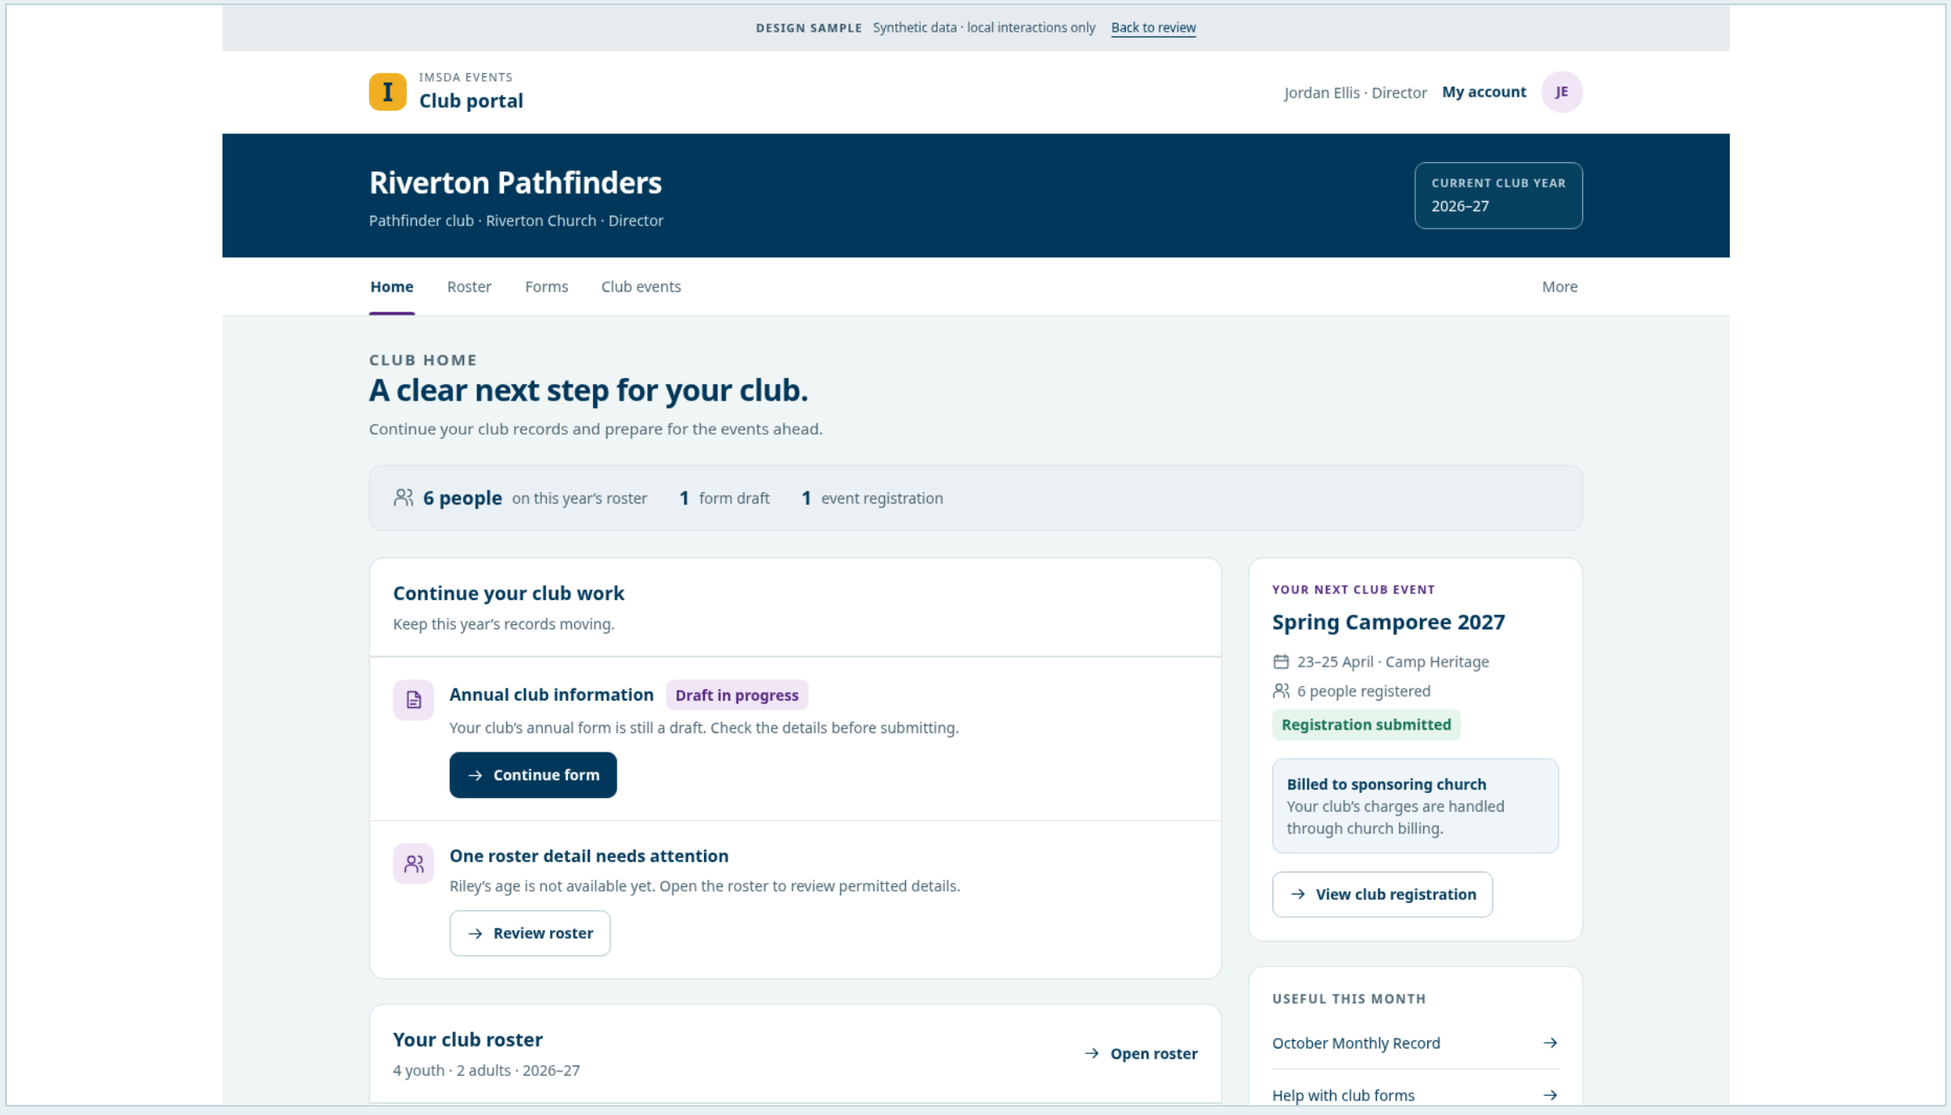

CLUB PORTAL

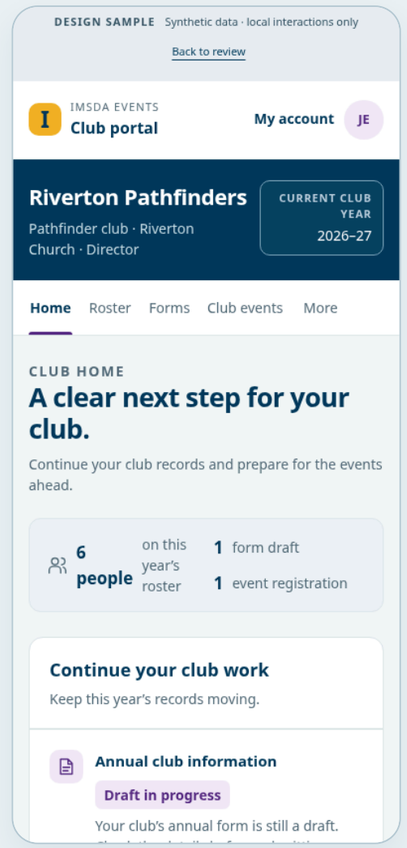

Club director: my club and club year

Maintain the club roster, finish club records and prepare the club's registrations.

Scope The selected club and its working year

Navigation Home · Roster · Club events · Forms · club tools

390 × 844 phone view

Club identity and year anchor the workspace. Camporee stays billed to the sponsoring church; the director is not presented with an attendee-style online balance.

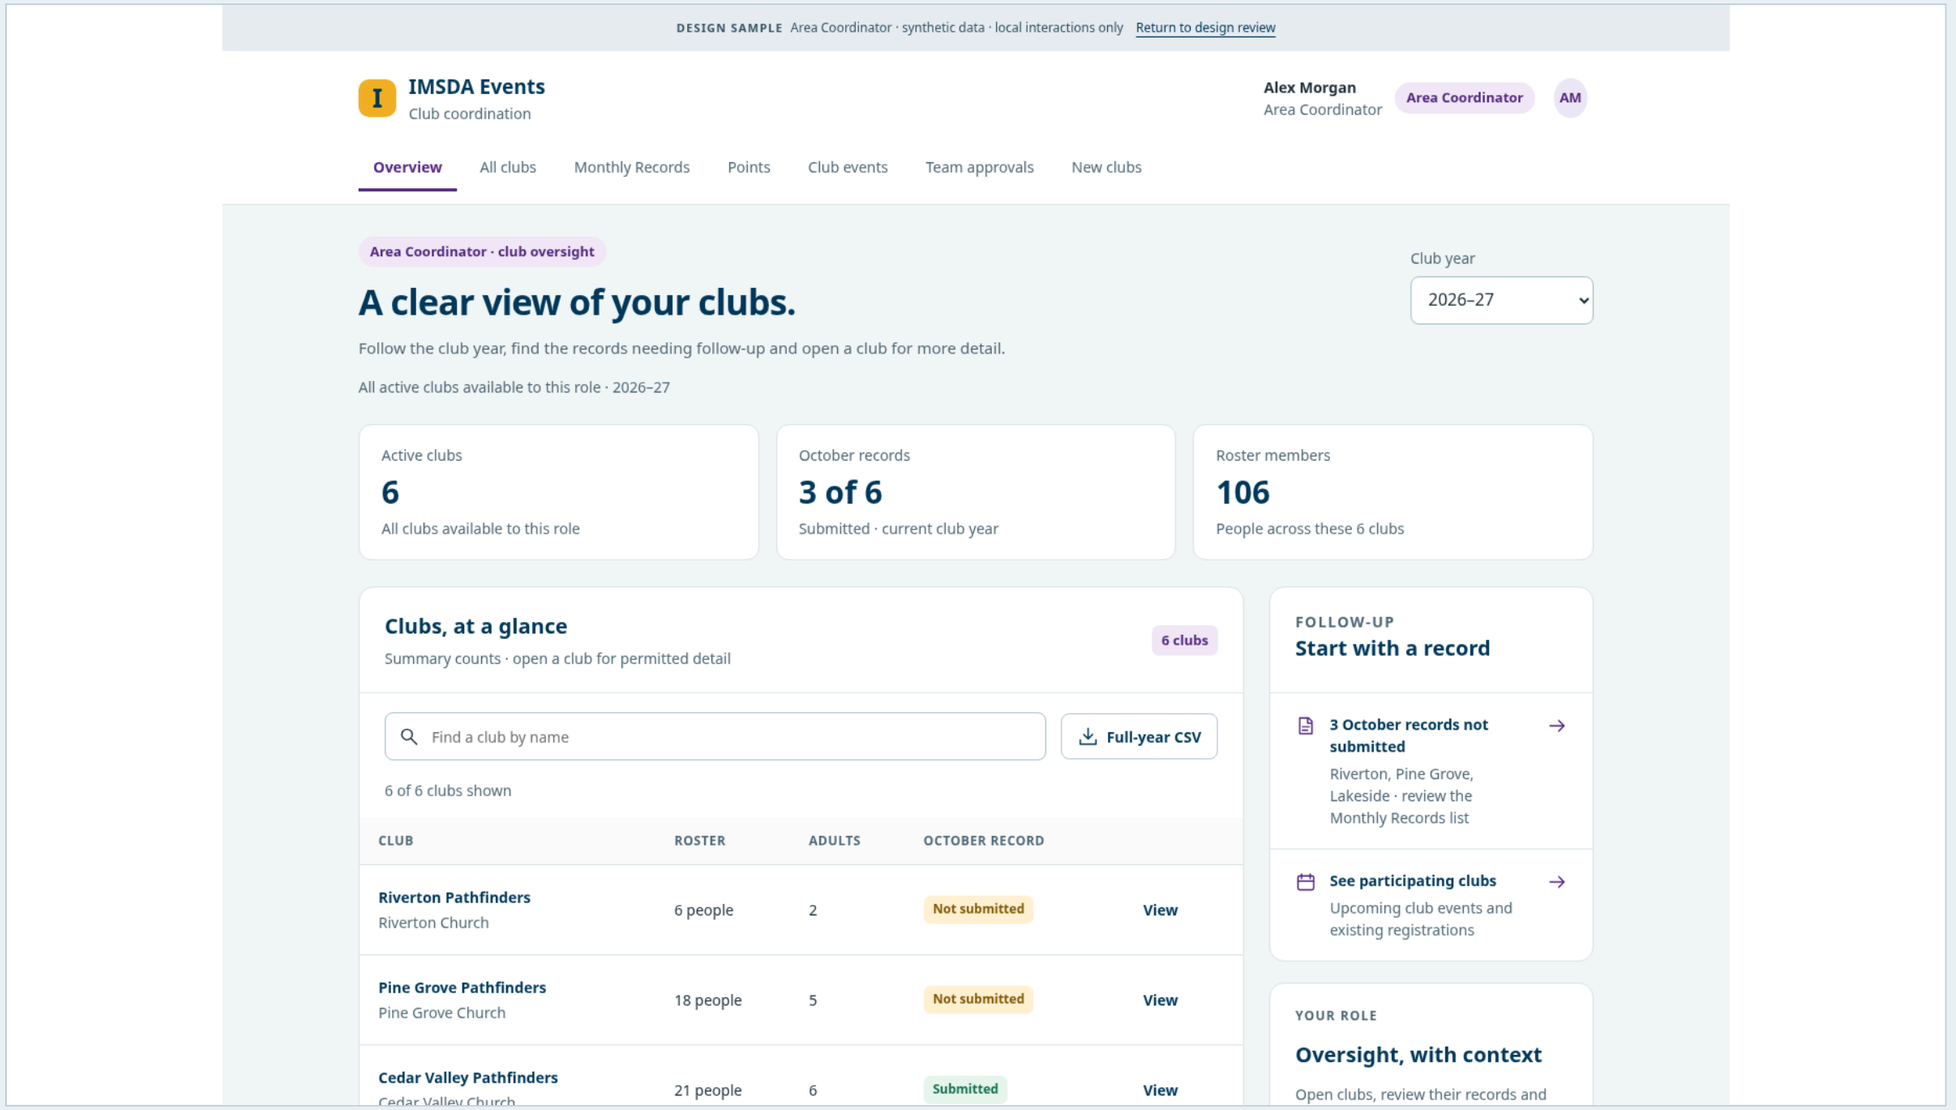

COORDINATION PORTAL

Area Coordinator: clubs available to me

Review club information, spot missing records and enter the specific review tasks the role permits.

Scope All active clubs available to this role

Navigation Club overview · Monthly Records · Points · Events

390 × 844 phone view

Read-only club oversight is distinct from director editing. There is no fictional area/ministry selector or generic approval queue.

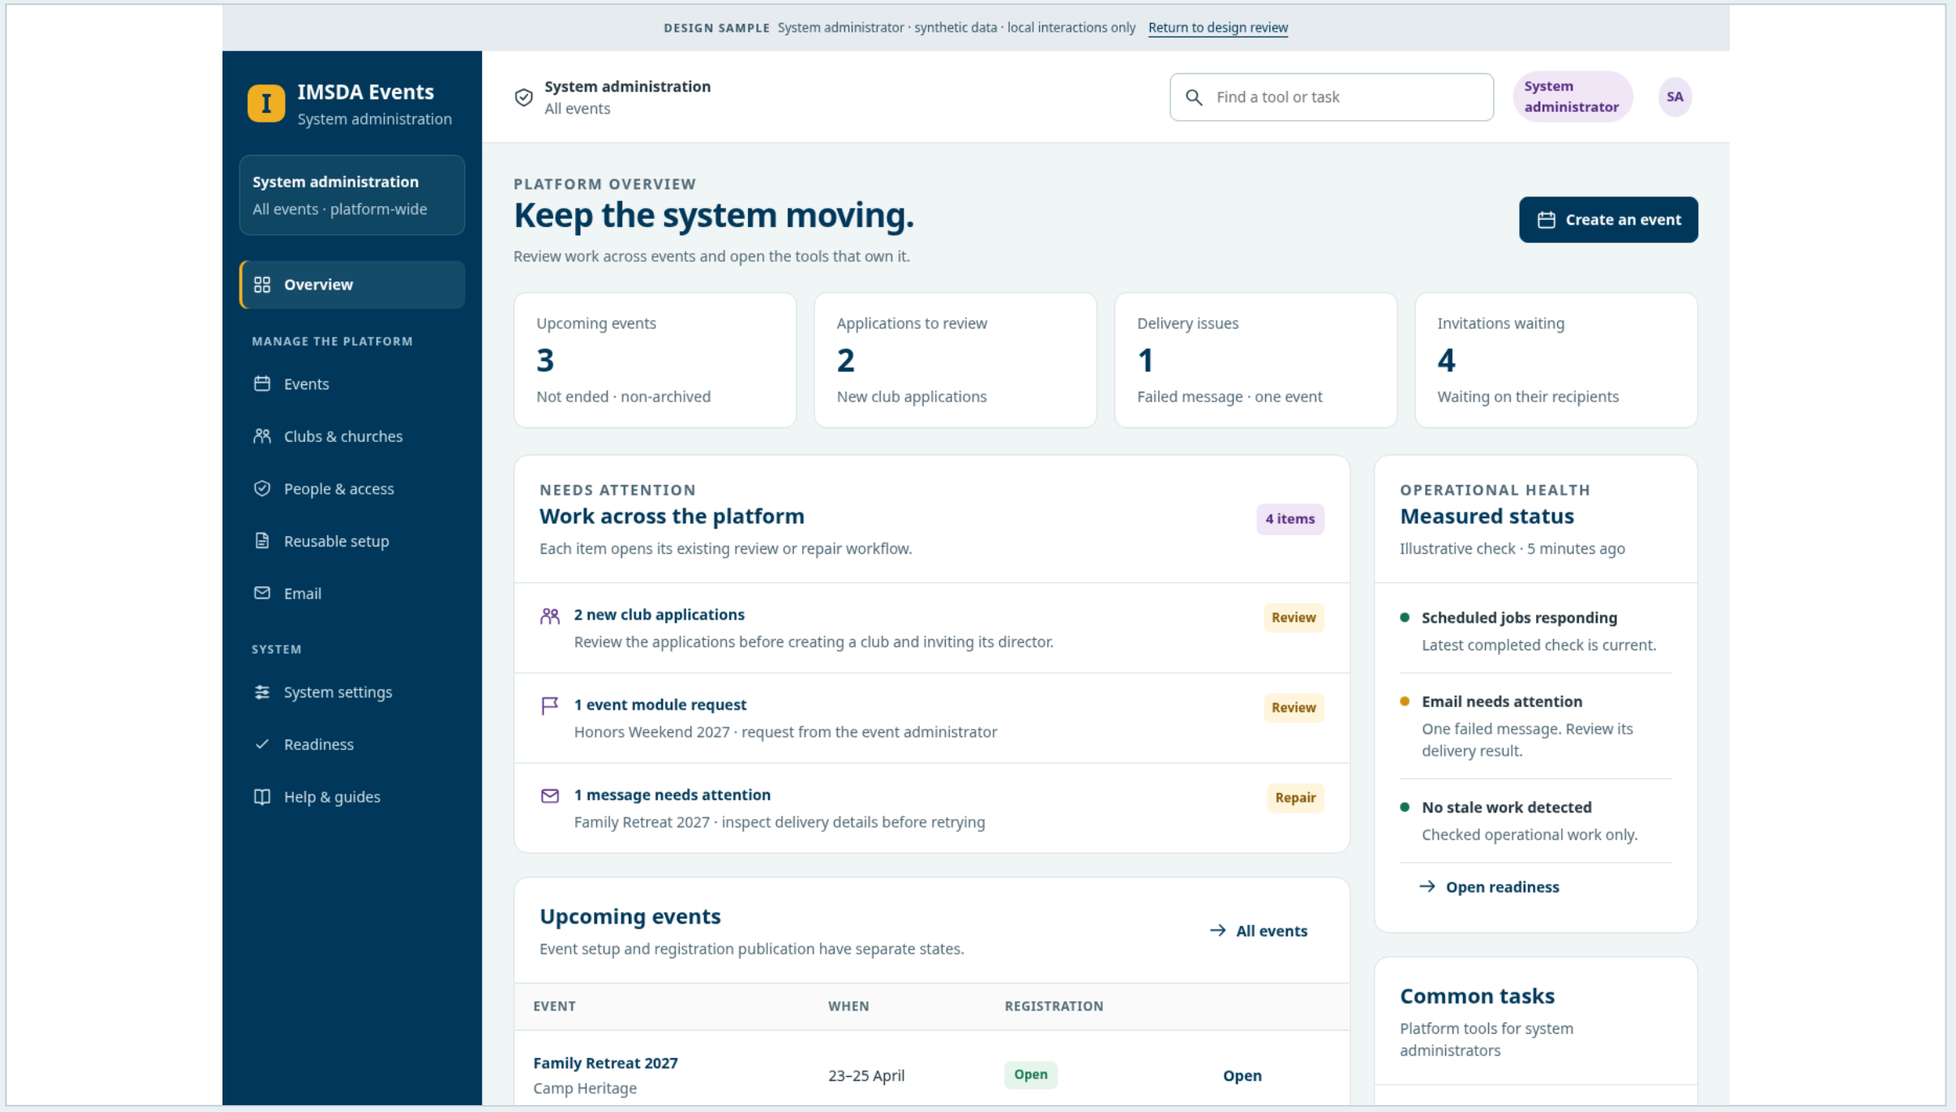

PLATFORM WORKBENCH

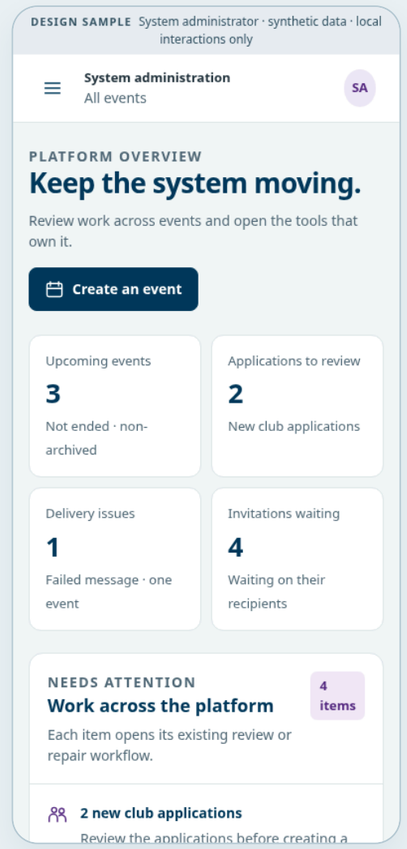

System administrator: the platform across events

Manage platform setup, access, cross-event work and system health.

Scope System administration · all events

Navigation Events · Clubs · People · Reusable setup · Email · Settings

390 × 844 phone view

Only this example uses the full administrator workbench. Entering an event remains a deliberate context change.
